Document No.: (1200/011/15) – Wob of 16/01/2015

Client: Société d'Exploitation des EtsRené  
Klingler & Fils Sarl  
10 Rue des Arcadias  
F - 67410 Drusenheim

Order date: 15/12/2014

Order Ref.: Korner

Order received: 15/12/2014

Subject: Determination of thermal conductivity of two types of mineral insulation boards

Test basis: DIN EN 12664

Test material received: 12/11/2014

Sampling: Made by the client

Test material marking: See section 2 of this report

Assessment period: 12/11/2014 until 08/12/2014

This Assessment Report consists of 6 pages, including the cover sheet.

This document is the translated version of Assessment Report No. 4202/530/14 – Wob dated 17/12/2014. The legally binding text is the aforementioned German Assessment Report.

This Assessment Report may not be circulated unless as a complete text without any alterations. Excerpts and abridged versions of this document are subject to approval in writing of MPA Braunschweig. Translations of this document that are made without the approval of the Testing House must bear the note "translation of the German original not examined by the Materials Testing Institute" in Braunschweig. The first sheet of this document and the page carrying the signatures bear the official stamp of MPA Braunschweig. Documents that do not carry a signature and the official stamp are invalid. The test material has been fully used. Accreditations are valid for the testing methods specified in the current documents. A list showing fields for which accreditation has been obtained can be made available upon request.

## 1 General information

On behalf of Société d'Exploitation des Ets René Klingler & Fils Sarl, France, CCM Technology e.K., Salzgitter, Germany, commissioned the Civil Engineering Materials Testing Institute (MPA) in Braunschweig with their order of 31/10/2014 to determine the thermal conductivity and the dry apparent density of two types of mineral insulation boards.

## 2 Material used for testing

The client delivered the following eight mineral insulation boards:

- Sample 1: 23.09 M2; apparent density: 100 kg/m<sup>3</sup>
- Sample 2: 23.09 M3; apparent density: 100 kg/m<sup>3</sup>
- Sample 3: 26.09 M4; apparent density: 100 kg/m<sup>3</sup>
- Sample 4: 26.09 M5; apparent density: 100 kg/m<sup>3</sup>
- Sample 5: 23.09 M1; apparent density: 125 kg/m<sup>3</sup>
- Sample 6: 23.09 M2; apparent density: 125 kg/m<sup>3</sup>
- Sample 7: 23.09 M3; apparent density: 125 kg/m<sup>3</sup>
- Sample 8: 26.09 M5; apparent density: 125 kg/m<sup>3</sup>

The mineral insulation boards were produced by CCM Technology e.K. at Salzgitter.

## 3 Test conditions for the mineral insulation boards; apparent density 100 kg/m<sup>3</sup>

### Pre-measurement material details

|  |   |
|--|---|
| Test method:   | Method with the single-specimen guarded hot plate based on DIN EN 12667                                   |
| Measuring unit/test set-up:                                  | $\lambda$ meter EP 500, supplier: Lambda, Dresden/Germany, in accordance with DIN EN 1946-2<br>Horizontal |
| Air conditioning/change in weight during the drying process: | 105 °C in the drying oven / -19 to -40 %; mean value: -34.6 %   |
| Testing engineer:  | Dr. M. Wobst  |
| Installation thickness:                                      | Sample 1: 0.0779 m<br>Sample 2: 0.0812 m<br>Sample 3: 0.0826 m<br>Sample 4: 0.0759 m                      |
| Other sample preparations:                                   | <ul style="list-style-type: none"><li>• Use of a vapour-proof covering (household plastic film)</li></ul> |
| Mean test temperature difference:                            | 10 °C   |
| Accuracy:  | < 3 %   |

## Post-measurement material details

|            |         |
|------------|---------|
| Thickness: | -0.44 % |
| Volume:    | -0.84 % |
| Weight:    | 0.19 %  |
| Density:   | -1.04 % |

### 3.1 Thermal conductivity and apparent dry density

The thermal conductivity was determined between 19. and 24. November 2014 at the mean temperatures 10, 20 and 30 °C. Results for thermal conductivity, thermal resistance and dry apparent density are listed below.

**Table 1:** Thermal conductivity readings at an apparent density of 100 kg/m<sup>3</sup>

| Sample     | Heat flux density [W/m <sup>2</sup> ] | Temperature difference [°C] | Mean temp. [°C] | Lambda [W/mK] | r [m <sup>2</sup> K/W] |
|------------|---------------------------------------|-----------------------------|-----------------|---------------|------------------------|
| 1          | 4.4                                   | 10                          | 10              | 0.0341        | 2.273                  |
| 1          | 4.6                                   | 10                          | 20              | 0.0357        | 2.173                  |
| 1          | 4.8                                   | 10                          | 30              | 0.0371        | 2.090                  |
| 2          | 4.3                                   | 10                          | 10              | 0.0350        | 2.304                  |
| 2          | 4.6                                   | 10                          | 20              | 0.0369        | 2.186                  |
| 2          | 4.8                                   | 10                          | 30              | 0.0385        | 2.096                  |
| 3          | 4.2                                   | 10                          | 10              | 0.0342        | 2.403                  |
| 3          | 4.4                                   | 10                          | 20              | 0.0362        | 2.27                   |
| 3          | 4.6                                   | 10                          | 30              | 0.0375        | 2.189                  |
| 4          | 4.7                                   | 10                          | 10              | 0.0353        | 2.137                  |
| 4          | 4.9                                   | 10                          | 20              | 0.0368        | 2.053                  |
| 4          | 5.1                                   | 10                          | 30              | 0.0387        | 1.953                  |
| Mean value | *                                     | 10                          | 10              | 0.0346        | *                      |
|            | *                                     | 10                          | 20              | 0.0363        | *                      |
|            | *                                     | 10                          | 30              | 0.0378        | *                      |

\* Because of the different sample thicknesses, mean values for the heat flux density and the thermal resistance cannot be specified.

**Table 2:** Calculated thermal conductivity and apparent dry density

| Sample            | Calculated $\lambda$<br>[W/m*K] | Density<br>[kg/m <sup>3</sup> ] |
